ENVIRO-TRASH CONCEPTS ANNOUNCES NEW COUNTER TOP MODEL FOR KITCHEN TRASH DISPOSAL

Merriam, KAN (October 14, 2008): For those eco-minded individuals searching for a more efficient way to dispose of their kitchen trash, Enviro-Trash Concepts has just announced their latest product, the Clean Chute Countertop Model, according to inventor, Loyd E. “Gene” Owen. “Our new unit is ideal for people who prefer a through-the-countertop option for their trash removal. It is a perfect solution for both indoor and outdoor kitchens; trash remains covered and away from view at all time thus eliminating unsightly (and smelly) garbage cans.”

The Clean Chute Counter Top Model installs directly in the counter. It features an 8”x 8” stainless steel access door that is held securely closed by two heavy-duty spring hinges and a magnetic closure. It is also sealed with weather stripping to avoid air and odor exchange. The attached chute leads to a container hidden under the counter. This model is for both residential and commercial use. The Clean Chute Countertop Model retails for \$800, not including installation.

The complete line of Clean Chute Trash and Recycle Systems products are ecologically friendly and meet the stringent requirements established by the green home building and remodeling associations. Clean Chutes promote a healthy home and a cleaner environment. They are manufactured from 80% recycled materials. The Clean Chutes are designed to follow the green/recycling movement. Enviro-Trash Concepts recently received the “Green Innovator Design Award” from *Kansas City Homes and Gardens Magazine*.

Enviro-Trash Concepts® has distributorships available. For more information, contact Marilyn Oden-McGill at (866) 671-8878. The web address is www.EnviroTrashConcepts.com.
